DETAILED ACTION

Claim Rejections - 35 USC § 112

1. Claims 5-7, 11-16 and 20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 5-7, it is unclear if or how "a" content limits the polyetherimide.

In claims 11-16, "organized by an organizing agent" is indefinite as to scope and meaning.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. 6,252,011 (Scott) in view of EP 1199333 and further in view of U.S. 5,747,560 (Christiani et al).

Scott discloses blends of polyetherimides, reading on applicants' polyetherimide, with polyesters of 2-6 naphthalenedicarboxylic acid, reading on applicants' polymer containing polyethylene naphthalate units.

Scott differs in essence from the present claims in not expressly disclosing the use of an inorganic filler. At column 6, lines 22-24, however, Scott disclose that conventional additives, which are considered generic to inorganic fillers, can also be incorporated into the formulations.

Art Unit: 1711

The addition of conventional inorganic fillers, such as mica and clays, in polyetherimide-polyester compositions is well known in the art as per EP '333 (page 11, line 50). Accordingly, it would have been obvious to one having ordinary skill in the art to add inorganic fillers, such as mica or other clays, for their expected additive effect into the formulations of Scott with the reasonable expectation of success.

With respect to the claims requiring a swellable, lamellar silicate as the inorganic filler, it would have been obvious to use the inorganic mica or clay in the form of a swellable-layered material because they are known to have superior properties as per Christiani et al. Accordingly, absent evidence of unusual or unexpected results, no patentability can be seen in the presently claimed invention.
